The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered. It is suggested that Applicant provide a copy of the references cited in the specification, as they are not readily available to the Examiner.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-8 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Applicant does not clearly teach what is encompassed by "a base matrix comprising a flavor" as Applicant does not teach any and all flavors and matrices.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hornstein in view of Ashurst.

Hornstein discloses a process for identification of flavor mixtures comprising selecting a flavor, analyzing the flavor by subjecting isolates and fractions of the flavor to headspace analysis, and using sensory evaluation to evaluate the results (see entire document, especially pages 72, 75, and 83-92).

The claims differ as to the specific use of the data to prepare a flavor.

Ashurst discloses flavor manufacture based on analysis of flavor materials (see pages 122-125).

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to use prepare a flavor as taught by Ashurst from the information provided by Hornstein because the use of flavor analysis to product flavors is conventional in the art.
